Customer Problem Statement

Core Problem:

The school IT helpdesk receives multiple incident requests daily (such as Wi-Fi issues, projector failures, password problems, and slow computers), but manual categorization by IT staff is time-consuming and inefficient.

Proposed Solution:

Automate ticket classification and routing using ServiceNow Flow Designer by analyzing keywords in the short description and description fields.

Manual Effort:

Currently, IT staff manually reviews each request and assigns a category and subcategory, which is inefficient.

Inefficiency:

This manual process is time-consuming, prone to human errors, and reduces the overall speed and responsiveness of the helpdesk service.

Auto Ticket Classification using FLOW DESIGNER - Problem Definition

I am	Describe customer with 3-4 key characteristics - who are they?	School IT Helpdesk Student / Teacher / IT Support Staff
I'm trying to	List their outcome or "job" they care about - what are they trying to achieve?	Raise and automatically classify IT support incidents quickly
but	Describe what problems or barriers stand in the way - what is the problem?	Manual ticket categorization is slow, repetitive, and delays resolution
because	Enter the "root cause" of why the problem or barrier exists - why is it a problem?	IT staff manually review and assign every category without automated routing
which makes me feel	Describe the emotions from the customer's point of view - how do they feel?	Frustrated, overwhelmed, and delayed due to inefficient ticket processing

Example:

Problem Statement 1 (PS-1)

- I am (Customer): Student / Teacher
- I'm trying to: Raise an IT support request for everyday issues (Wi-Fi, Projector, Password)
- But: Manual categorization by support staff is slow and causes delays
- Because: IT agents review each ticket manually without automated routing
- Which makes me feel: Frustrated & Delayed

Problem Statement 2 (PS-2)

- I am (Customer): IT Support Staff
- I'm trying to: Process a high volume of helpdesk tickets efficiently
- But: Too many incoming tickets take excessive time to sort and categorize
- Because: There is no automated keyword-based classification system in place
- Which makes me feel: Overwhelmed & Inefficient
