

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

DATE	28 SEPTEMBER 2026
TEAM ID	6ab220cfbee0b08a2d2c63cd
PROJECT NAME	AUTO TICKET CLASSIFICATION USING FLOW DESIGNER
MAXIMUM MARKS	4 MARKS

Functional Requirements:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Creation	Create Incident Ticket
		Enter Short Description
		Enter Detailed Description
FR-2	Flow Trigger	Trigger Flow on Ticket Creation
		Monitor New Incident Records
FR-3	Ticket Analysis	Read Ticket Details
		Analyze Keywords in Description
		Evaluate Classification Rules
FR-4	Automatic Classification	Assign Category Automatically
		Assign Subcategory Automatically
		Set Priority Based on Conditions
FR-5	Assignment Management	Assign Appropriate Support Group
		Route Ticket to Responsible Team
FR-6	Notification Management	Send Notification to Assigned Team
		Update Ticket Status
FR-7	Reporting & Monitoring	Generate Classification Reports
		Monitor Ticket Processing Status

Non-functional Requirements:

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The system should provide an easy-to-use interface for creating and managing tickets.
NFR-2	Security	Access to tickets and workflows should be controlled through role-based permissions and authentication.
NFR-3	Reliability	The system should accurately classify tickets and perform workflow actions consistently.
NFR-4	Performance	Ticket classification and assignment should be completed within a few seconds of ticket creation.
NFR-5	Availability	The application should be available continuously through the ServiceNow cloud platform.
NFR-6	Scalability	The system should support increasing numbers of tickets without affecting performance.
NFR-7	Maintainability	Workflow rules and classification logic should be easy to update and modify.
NFR-8	Auditability	All ticket updates and workflow actions should be logged for tracking and compliance purposes.
