

No. of Functional Features Included in the Solution

Date	28 September 2026
Team ID	6ab220cfbee0b08a2d2c63cd
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	5 Marks

Functional Features Overview:

This project features a comprehensive school IT helpdesk automation system designed to streamline support ticket management using ServiceNow Flow Designer. The solution begins with an Automated Incident Intake module, where a dedicated custom table (u_incident_workflow) captures and stores all incoming support requests submitted by students and teachers. To eliminate manual sorting delays, the system utilizes an Automated Trigger Setup that instantly initiates a workflow whenever a new unclassified ticket is logged.

S.No	Feature Name	Feature Description	Module / Component	Status (Done / In Progress / Pending)	Marks Contribution
1.	Custom Incident Table Creation	Creates a dedicated custom table (u_incident_workflow) to manage and store school IT helpdesk support tickets.	ServiceNow Database & Dictionary	Done	15%
2.	Automated Trigger Setup	Configures flow triggers to initiate automatically whenever a new ticket is created and the category field is empty.	ServiceNow Flow Designer	Done	15%
3.	Keyword-Based Filtering	Evaluates incoming Short Description inputs to scan for target keywords (e.g.,	Flow Designer Conditional	Done	20%

	Logic	Wi-Fi, Projector, Password, Slow).	Actions		
4.	Automated Category Routing	Implements If/Else-If visual branching to auto-assign appropriate categories and subcategories without manual sorting.	Flow Designer Logic Blocks	Done	20%
5.	Dynamic Dependent Choices	Links subcategory choices dynamically to main categories so options update seamlessly on incident forms.	ServiceNow Dictionary Overrides	Done	10%
6.	Automated Email Notifications	Triggers automated email notifications to callers confirming successful ticket logging and classification.	ServiceNow Notification Engine	Done	10%
7.	System Event & Audit Logging	Tracks execution history, action paths, and debugging data through ServiceNow system logs.	System Logs & Reporting	Done	5%
8.	User Acceptance Testing (UAT)	Validates end-to-end automation workflows against predefined test scenarios to ensure zero failure rates.	Quality Assurance & Testing		

Feature Summary:

Metric / Parameter	Count / Value
Total Features Planned	8
Total Features Implemented	8
Core / Must-Have Features	5 (Custom Table Creation, Trigger Setup, Keyword Parsing, If/Else-If Routing, Dependent Choices)
Additional / Nice-to-Have Features	3 (Automated Email Notifications, System Event Logging, UAT Validation)
Features Tested & Verified	8 (100% End-to-End Flow Tested & Verified)

Feature Category Breakdown:

S.No	Category	Features in Category	Example Features
1.	User Interface (UI)	Incident Form Layout, Dynamic Dependent Choice Fields, Portal View	Standardizing form fields for students and teachers to submit IT requests cleanly.
2.	Backend / Logic	Flow Designer Automation, Keyword Parsing, If/Else-If Conditional Branching	Auto-scanning short descriptions and routing tickets to correct categories.
3.	Database / Storage	Custom Table Creation (u_incident_workflow), System Audit Logs	Storing structured incident records and tracking historical execution logs.
4.	API / Integration	Automated Email Notification Engine, System Log Integration	Dispatches instant acknowledgment emails to callers upon successful ticket classification.
5.	Security / Authentication	Role-Based Access Control (RBAC), ServiceNow User Roles	Restricting workflow configuration access to admins while allowing students/teachers to raise tickets
