

Project Demo Planning

Date	28 September 2026
Team ID	6ab220cfbee0b08a2d2c63cd
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	1 Mark

Project Demo Planning:

- **Project Demo Planning** means preparing a clear plan for how our **Auto Ticket Classification using Flow Designer** project will be presented during the final demo. It helps the team explain the project step-by-step within the available time and ensures that all important features are demonstrated.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Project Introduction	Introduce the project Auto Ticket Classification , explain the problem of manually classifying support tickets, project objective, and how the system helps automate ticket classification.	3	Member 1
2	Problem & Proposed Solution	Explain the existing problem, such as manual ticket classification, time consumption, human errors, and inconsistent categorization. Then explain the proposed automated solution.	3	Member 2
3	Flow Designer & System Workflow	Demonstrate the Flow Designer workflow and explain how a new ticket enters the system, how the ticket information is processed, classified, and assigned to the appropriate category/team.	5	Member 3
4	Key Features & Modules	Demonstrate important features such as Ticket Creation, Automatic Classification, Category Identification, Priority Handling, Ticket Assignment, and Status Tracking.	5	Member 4
5	Live Demo / Test Scenarios	Create sample tickets and show how the system automatically classifies them. Demonstrate both positive and negative test scenarios and explain	5	Member 1 & 2

		the expected and actual results.		
6	Results & Conclusion	Show the final results, explain the benefits of automation, summarize the project outcome, mention challenges and solutions, and conclude with future enhancements.	4	Member 3 & 4

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Introduce the Auto Ticket Classification using Flow Designer project. Explain the problems with manual ticket classification, such as time consumption, human errors, incorrect categorization, and delayed ticket assignment.
2	Solution Overview	Explain how our system automatically processes incoming support tickets and classifies them based on the ticket details. Introduce the Flow Designer workflow, including ticket creation, processing, classification, priority handling, and assignment.
3	Live Feature Demonstration	Demonstrate the actual project workflow by creating sample support tickets. Show how the system automatically identifies the appropriate ticket category, priority, assignment, and status. Demonstrate both valid and invalid/negative scenarios where applicable.
4	Q&A Session	Answer questions about the project architecture, Flow Designer workflow, classification process, testing, challenges faced, and future enhancements.
