Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	1 Mark

Scalability & Future Plan:

- Scalability:**
Our system can handle an increasing number of tickets, users, and support teams. New ticket categories, priorities, and automated workflows can be added as the project grows.
- Future Plan:**
In the future, we can add AI-based ticket classification, automatic priority detection, smart ticket assignment, email notifications, dashboards, reports, and multilingual support.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address
1	Limited ticket categories	Some new or uncommon tickets may not be classified correctly.	High
2	Basic classification rules	Complex ticket descriptions may require manual checking.	Medium
3	Limited automation and reporting	Advanced notifications, analytics, and detailed reports are not available.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports the current number of users and tickets.	Scale the workflow to handle more users and incoming tickets.
2	Data Storage	Stores basic ticket information.	Expand storage to manage large amounts of ticket history and data.

3	Performance	Processes tickets through the current Flow Designer workflow.	Optimize workflows to maintain faster processing when ticket volume increases.
4	Security	Basic access and ticket data protection.	Add stronger access control, authentication, and data security measures.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Add more ticket categories and automatic priority detection.	Short Term	Improves classification accuracy and ticket handling.
Phase 3	Integrate AI-based classification, smart assignment, and notifications.	Medium Term	Reduces manual work and improves automation.
Phase 4	Add dashboards, analytics, multilingual support, and advanced reporting.	Long Term	Provides intelligent monitoring and supports large-scale usage.
